

UNLEASH YOUR POTENTIAL®

Men in their prime are powerful. They have muscle. They exhibit energy, drive, and confidence. They know what they want, and they know how to get it done.

But as time marches on, maintaining prime levels of these traits gets harder. That's due in part to the fact that human growth hormone (HGH) levels naturally decline with age. It's not your fault, but there is something you can do about it.

Certain key ingredients, including potent compounds blended in specific dosages, have been clinically shown to help spike HGH in combination with exercise. This gives you more of what you want, even as you get older. It's the proverbial fountain of youth that men from all walks of life are constantly trying to find.

You may not be able to turn back time, but you can feel more like you did in your prime. More force during workouts. A stronger libido. Endurance and stamina to conquer even the toughest tasks. What guy doesn't want to feel more like the optimal man?

Amplifying the production of HGH during workouts just may be the missing link in helping you fully Unleash Your Potential®. And with Prime HGH Secretion Activator™, it's never been easier.

THE MAXIMUM MASCULINITY STACK

Acutely increasing HGH is a critical component of maximizing your masculinity, but it isn't the only goal you should be looking to achieve. Boosting testosterone is another vital piece of the puzzle, and Force Factor's **Alpha King™** and **Test X180 Ignite Pro™** are uniquely suited to deliver the surge you desire.

DIRECTIONS

Workout Days: Take 5 capsules 90 minutes before working out.
Rest Days: Take 5 capsules 30 minutes before bedtime.

PRIME SOMATOTROPIN ACTIVATION

Human growth hormone (HGH) levels are tied to the most fundamental biological processes in men: the ability to burn fat; peak cognitive and physical performance; sleep and muscle development; power, energy, and confidence; even libido and sex drive.

Increasing serum HGH levels can thus produce a multitude of benefits — the kind of boost every guy craves. And fortunately, acute activation of HGH secretion during exercise is scientifically attainable with the right synthesis of key ingredients.

A recent clinical study shows that after just a single dose, 600mg of AlphaSize® in conjunction with strength training generates a significant increase in HGH versus exercise alone — an outcome that was repeated again and again.

Separately, another controlled clinical study examined the impact of 1,200mg each of the amino acids L-arginine pyroglutamate and L-lysine HCl on HGH secretion, and the results were nothing short of remarkable. The researchers observed a 700%+ increase in acute serum HGH secretion, and the finding was again able to be empirically repeated.

Prime HGH Secretion Activator™ contains *both* 600mg of AlphaSize *and* the studied combination of L-arginine pyroglutamate and L-lysine HCl. This premium formula also includes L-glutamine and *Mucuna pruriens*, standardized for L-dopa, to support healthy HGH levels in men.

If you're looking for the ultimate formula to help trigger HGH secretion during physical activity, you found it.
